

PROPOSAL

TS Academy Submit

This proposal comes from my own experience as a moderator at TS Academy. It has been nice working with the team. Still, I kept thinking that we could have a better way to receive work, one that makes life easier for moderators when they mark. Careful manual marking is the goal, and I would like to protect it.

In moderator meetings I often hear the same things: students sending work twice, links that cannot be opened, work landing in the wrong box. Together with what I have seen myself, that made me ask a simple question. Instead of a Google Form, why not a TS Academy Submit form? It checks each submission before it reaches a moderator, so moderators spend their time on what matters, which is marking. In the pages below, you will see what it does and how it can help all of us.

Fidelia Joseph, moderator. All names, emails and links in the screenshots are sample data.

WHY THIS EXISTS

The same problems keep coming back

Work is collected with a Google Form and marked from a shared sheet. This is what goes wrong, cohort after cohort.

Sent again and again

The same student submits the same work many times.

Sent with nothing

Some students submit with no link at all.

Wrong place

A Trello link lands in the box that asked for a Notion link.

Cannot be opened

Links are set to private, so moderators cannot read the work.

Not a student

Anyone with the form link can send something in.

One messy sheet

Every course from every cohort lands in the same place.

THE IDEA

Check everything before it reaches a moderator

Marking stays with people. What changes is everything before marking. The system does the boring checking, so work arrives complete, in the right box, and opens when a moderator clicks it.

THE PROBLEM	WHAT TS ACADEMY SUBMIT DOES
Sent again and again	One submission per student per task. The database itself enforces this, not only the screen. A student who tries again is told they already submitted.
Sent with nothing	The Submit button stays locked until every box holds a link, and a line under it says what is still missing.
Wrong place	Each box checks the kind of link as the student types. A Trello link in a Notion box is turned away, with a message saying what it is and what is needed.
Cannot be opened	The system opens every link the way a stranger would. Locked links are turned away with steps to fix them.
Not a student	The form only opens when the name and email match the list uploaded for that cohort and course. The list stays on the server and is never sent to the student's phone. Guessing is limited.
One messy sheet	Every cohort and every course is kept apart. A moderator sees only the courses given to them.

WHAT A STUDENT SEES

A form that works on any phone

Students need no account and no password. They open the link they were sent. The name of the form, the course and the cohort are already filled in.

Virtual Assistant, Cohort 7 Submissions

Virtual Assistant, Cohort 7 Submissions

Virtual AssistantCohort 7

Week 4 Assignment

You already submitted this on 29 September 2026. Each student gets one submission.

Need to change something?

You get one request for this task. A moderator will read it.

Replace a link
Send a new link in place of one

Leave a note
For example, I updated my board

Which link do you want to replace?

Google Sheet

New Google Sheet link

It must be the same kind of link. In your Sheet, click Share, set General access to Anyone with the link, then copy the link.

https://

☒ Right kind of link

☐ Opens for anyone

Why do you need to replace it?

Say what was wrong and what you are sending instead.

At least 40 characters (0 so far).

Send request

Replace a link or leave a note

WHAT ADMINS AND MODERATORS SEE

One organised place for every cohort and course

Admins create cohorts and courses, add students, invite moderators and give them their courses. A moderator normally looks after one course,

though the system also allows more than one. Moderators work only in the course they were given.

Staff sign in

Admins invite people by email and each person gets a one time code. They use it once to choose their own password.

Course overview

Student list

This is the one place where wrong information can get in, so it is the one place that is guarded. TS Academy already has a list of its students. Upload it as an Excel or CSV file with two columns: full name and email address. The system finds those columns and shows a preview before anything is saved. It flags three things: a missing or badly typed email, the same email twice in the file, and a student who is already on the list. Flagged rows are skipped, and the clean rows are imported. Once imported, this list is what the student form checks names and emails against.

[← Back to Virtual Assistant, Cohort 7](#)

Students

This is the list the form checks. A student can only submit if the name and email they type match a row here. **24 students** on this list.

Marking a submission

Requests

The old link and the new link side by side, then Allow or Decline. If the work was already marked, it is flagged so it is checked again.

Not submitted

Who has not sent a task yet, ready to follow up, and downloadable.

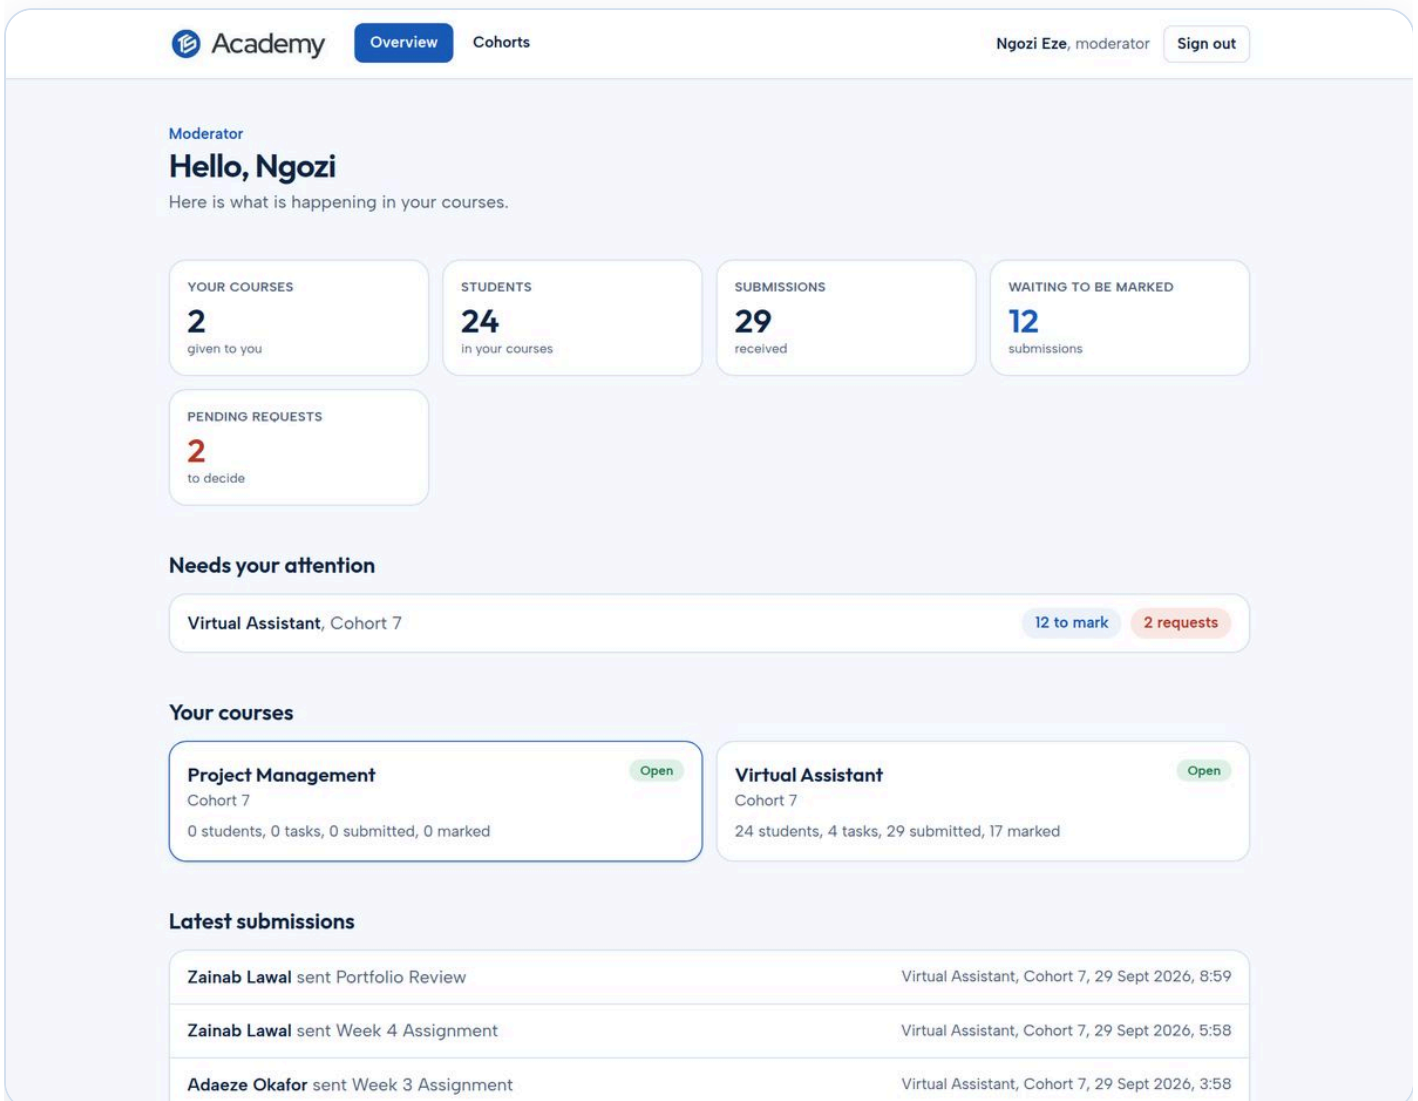

Students who have not submitted

Requests from students

A moderator's view

The same pages, but only for the courses given to them. No cohort creation, no invites, nothing from other courses.

Moderator overview

Download to Excel or CSV

Download one task, all assignments, the capstone, or a whole course, as Excel or CSV. You choose what goes in the sheet. Name, email, task and date are always there. You can add or leave out the links, the score and comment, and the marking details. A moderator who has already scored the work can download a short sheet with no links at all. One who wants to check the work again can include the links and open each one. The system never marks anything for you. A sample of a download with links:

Overview on a phone

SAFE BY DESIGN

What protects the work and the students

- Nothing is graded automatically. Every score is given by a moderator.
- The student list is checked on the server and never sent to a phone. The number of tries is limited.
- Every course is separate. A moderator cannot see, change or download another course.
- Sign in uses a password each person chooses, from a one time invite code an admin creates.
- The rules that separate courses are enforced by the database itself, not only by the screens.
- A moderator cannot change what a student sent. They can only mark it.

WHAT COULD COME NEXT

Ideas that are not built yet

Email reminders

An email to the moderator each time a student submits.

Extra check

An optional code sent to the student's email before the form opens.

Your own address

Hosting on a TS Academy web address, with its own settings and logo.

TRY IT

See it for yourself

Would you like to try it? Send me your email address and I will add you as a moderator, so you can see the admin side the way a moderator sees it. I will also send you the student form link, so you can see the form the way a student does.

Next steps

- Try the student form and the moderator side, and tell me anything you would change.
- If the team likes it, I would love to hear your feedback.
